FDA Commissioner Jane E. Henney
5600 Fishers Lane
Rockville, Maryland 20857

Dear Commissioner Henney:

I received your address from the Center for Science in the Public Interest.

The public is now being provided with more information about such as issues as livestock producers routinely adding medically important antibiotics to animal feed to promote growth...and WE DON'T LIKE IT. Now that the public is aware of these issues, we want the FDA to STOP these situations.

The general public is under the false impression government agencies such as the FDA are keeping the food and health systems in check in the community's welfare. The more I read, the more I believe this is absolutely NOT TRUE.

The public wants organic, pure meats and vegetables. Monsanto is a leading culprit in genetically engineered foods such as the genetically produced potato (are you familiar with this) which is creating lots of illnesses I am sure.

Finally, I am asking as a parent, as a member of the community who believes as our "dear" Native American Indians believe, to prepare and maintain our society and environment for the "seventh generation" NOT JUST THE CURRENT PROFIT-MAKING GENERATION.

I hope you will try to make a difference and urge your constituents to mandate more naturally, organic methods of growing foods for our society.

Thank you for your compassionate interest.

Sincerely,

Paula I.

Long
